

Nomura Japan Equity Beta Select indices

EQUITY QUANTITATIVE RESEARCH (INDEX)

Index rulebook

Nomura Japan Equity Beta Select indices

Nomura Japan Equity Beta Select indices refer to the following two indices drawn from a universe of all common stocks listed on Japanese stock exchanges: the Nomura Japan Equity High Beta Select 30 and the Nomura Japan Equity Low Beta Select 50, which comprise the top 30 and the bottom 50 stocks respectively in terms of a quantitative indicator based on beta (sensitivity) versus Japanese equity market returns and USD/JPY returns. These indices are weighted by free-float-adjusted market capitalization (individual stock weights are capped at 5%).

Index characteristics

- The Nomura Japan Equity High Beta Select 30 comprises the top 30 stocks in terms of a quantitative indicator based on three scores that show market correlation (market beta, forex beta, momentum).
- The Nomura Japan Equity Low Beta Select 50 comprises the bottom 50 stocks in terms of a quantitative indicator based on three scores that show market correlation (market beta, forex beta, stock-specific risk).
- Indices are reconfigured twice a year, as a general rule.
- While the indices are weighted by market cap, individual stock weights are capped at 5% to prevent the indices from being excessively weighted toward large caps.
- To take investability into account, we also screen for free-float-adjusted market cap and average daily turnover.

1. Periodic reconfigurations

1.1 Periodic reconfiguration date

Periodic reconfigurations take place twice a year, on the first business day of June and the first business day of December, and the reconfigurations are carried out after the close of trading on the business day preceding the periodic reconfiguration date.

1.2 Periodic reconfiguration base date

The reconfiguration base date is the fifth business day of the month preceding the periodic reconfiguration date. Constituent stocks and the number of shares in each constituent stock to be included in the index following its periodic reconfiguration are determined on the basis of calculations using data as of the reconfiguration base date.

1.3 Announcement of periodic reconfiguration data

As a general rule, an announcement will appear on our website 10 business days before a periodic reconfiguration around 16:00 (JST), except in cases of unforeseen circumstances or when information cannot be confirmed.

2. Stock selection and index construction method

2.1 Stock selection universe

The stock selection universe includes the top 98% of all stocks listed on Japanese stock exchanges¹ in terms of free-float-adjusted market cap as of 15 October in the year before the periodic reconfiguration base date (or the business day before this if 15 October is a non-business day; this is called the stock selection universe fixing date), out of all stocks listed on Japanese stock exchanges as of the end of March in the year before the periodic reconfiguration base date in December. The stock selection universe also includes newly merged stocks and those in approximately the top 85% in terms of free-float-adjusted market cap out of the stocks² that were listed in or after April and before the last day of the month three months prior to the periodic reconfiguration base date. Stocks that meet the following criteria as of the reconfiguration base date are excluded.

- **Equities other than common stock**

As a general rule, only common stock is included in the stock selection universe. However, exceptions to this rule will be made if necessary.

- **Stocks assigned for delisting**

Stocks assigned for delisting are not included in the universe.

- **Stocks under supervision (examination) and stocks under supervision (confirmation)**

Stocks under supervision (examination) and stocks under supervision (confirmation) that are not part of the index composition immediately prior to regularly scheduled reconfigurations are not included in the universe.

- **TOB target companies³**

Stocks that are the targets of tender offers (ie, TOBs) may be excluded from the universe of stock selection only if all of the following requirements are met:

(1) the company conducting the tender offer plans to acquire all the outstanding shares in the target company; and

(2) the company conducting the tender offer is planning to acquire all of the stock of the target company in exchange either for money or its own stock, and the target company agrees to the offer.

- **Listed investment trusts/REITs**

- **Foreign stocks**

Stocks listed on foreign sections of Japanese exchanges or stocks regarded as overseas companies are excluded, even if these stocks are traded in the Japanese market.

- **Others**

Latent stock, warrants, and rights on them are excluded. The Bank of Japan is also excluded.

¹ Tokyo Stock Exchange (1st Section, 2nd Section, Mothers, JASDAQ, TOKYO PRO Market), Nagoya Stock Exchange, Sapporo Securities Exchange, and Fukuoka Stock Exchange.

² This applies to stocks listed between April and the end of September for the December reconfiguration and to stocks listed between the previous April and the end of March for the June reconfiguration.

³ This rule will apply to periodic reconfigurations from December 2016.

2.2 Composite score calculation method

Index constituents are selected on the basis of the value of a quantitative indicator (the composite score) that reflects beta (sensitivity) versus Japanese equity market returns and USD/JPY returns. The procedure set out below is used to calculate the composite score.

Composite score calculation procedure

- 1) For the stocks included in the composite score calculation universe (2.2.1), four scores (2.2.3) are calculated on the basis of data covering a specified historical period (2.2.2) as of the periodic reconfiguration base date.
- 2) For each of these four scores, a standardized score (2.2.3) is calculated by adjusting the scores so that the average for the composite score calculation universe is zero and the standard deviation is one.
- 3) The composite score (2.2.4) is calculated by taking the average of the standardized scores.

2.2.1 Composite score calculation universe

Using data as of the periodic index reconfiguration base date, stocks within the stock selection universe (2.1) that meet the following market cap and liquidity criteria are eligible for inclusion in the composite score calculation universe.

Market cap and liquidity criteria

- Top 85% of the stock selection universe in terms of free-float-adjusted market cap
- Top 500 stocks in terms of average daily turnover over the past 60 days

2.2.2 Data used for composite score calculation

Macroeconomic data (market return, USD/JPY return) and share price return data for individual stocks available as of the periodic reconfiguration base date are used to calculate the composite score.

• Market return

Average monthly return on the stock selection universe, weighted by free-float adjusted market cap⁴

• USD/JPY return

Average monthly return on the USD/JPY middle rate as announced by the BOJ

• Share price return on individual stocks

Monthly return on individual stocks

2.2.3 Composite score calculation method

The following four scores are calculated for each stock using data covering a specified historical period as of the periodic reconfiguration base date. For each of these four scores, a standardized score is calculated by adjusting the scores so that the average for the composite score calculation universe is zero and the standard deviation is one.

• Market beta

The market beta score is the regression coefficient obtained through a linear regression of the monthly share price return on the individual stock versus the monthly market return over the 60 months preceding the periodic reconfiguration base date. When less than 12 months' worth of historical data is available, this is treated as a case in which

⁴ Monthly returns on individual stocks are calculated using the month-end Nomura composite share price (see below). Same hereafter.

data is not available⁵, but when 12 months or more of historical data is available all usable data is used.

- **Forex beta**

The forex beta score is the regression coefficient obtained through a linear regression of the monthly share price return on the individual stock versus the monthly USD/JPY return over the 60 months preceding the periodic reconfiguration base date. When less than 12 months' worth of historical data is available, this is treated as a case in which data is not available, but when 12 months or more of historical data is available all usable data is used.

- **Momentum**

The momentum score is the intercept in a linear regression of the monthly share price return on the individual stock versus the monthly market return over the 11 months preceding the periodic reconfiguration base date. When less than 11 months' worth of historical data is available, this is treated as a case in which data is not available.

- **Stock-specific risk**

The stock-specific risk score is the standard deviation of the residual in a linear regression of the monthly share price return on the individual stock versus the monthly market return over the 60 months preceding the periodic reconfiguration base date. When less than 12 months' worth of historical data is available, this is treated as a case in which data is not available, but when 12 months or more of historical data is available all usable data is used.

Linear regression method

For each individual stock, the value of the regression coefficient and intercept are calculated using the least sum of squares method, where the sum of the squares of the residuals in the linear regression set out below is minimized. The dependent variable in the linear regression is the monthly share price return on the individual stock and the independent variable is macroeconomic data (monthly market return or monthly USD/JPY return).

$$\begin{aligned} & \text{Monthly share price return on stock } i_t \\ &= \text{regression coefficient for stock } i \times \text{independent variable } t \\ & \quad + \text{intercept for stock } i + \text{residual for stock } i_t \\ & t = \text{month-end} \end{aligned}$$

Calculation of standardized score

The following method is used to calculate a standardized score for each of the four scores set out above⁶. When data is not available for a particular stock, the standardized score for the stock is also treated as not available and this is not included in the calculation of the average and standard deviation for the composite score calculation universe.

$$\begin{aligned} & \text{Standardized score for stock } i \\ &= \frac{(\text{score for stock } i - \text{average score for composite score calculation universe})}{\text{standard deviation of scores in composite score calculation universe}} \end{aligned}$$

⁵ See 2.2.4 for treatment when data is not available.

⁶ Adjusted so that standardized scores are between -3 and +3, with standardized scores of more than 3 adjusted to 3 and standardized scores of less than -3 adjusted to -3.

2.2.4 Calculation of composite score

For the Nomura Japan Equity High Beta Select 30, a standardized score is calculated for three of the four scores set out in 2.2.3—market beta, forex beta, and momentum—and the average of these three standardized scores is treated as the composite score for the purpose of selecting the 30 stocks for the index. For the Nomura Japan Equity Low Beta Select 50, a standardized score is calculated based on three of the four scores set out in 2.2.3—market beta, forex beta, and stock-specific risk—and the average of these three standardized scores is treated as the composite score for the purpose of selecting the 50 stocks for the index. When calculating the average of the standardized scores, if data is not available the value is taken to be zero.

Fig. 1: Scores used in calculation of composite score

Score	Details	Nomura Japan Equity High Beta Select 30	Nomura Japan Equity Low Beta Select 50
Market beta	Market beta over past 60 months	○	○
Forex beta	USD/JPY beta over past 60 months	○	○
Momentum	Share price return over past 11 months adjusted for market beta	○	-
Stock-specific risk	Standard deviation of share price return over past 60 months adjusted for market beta	-	○

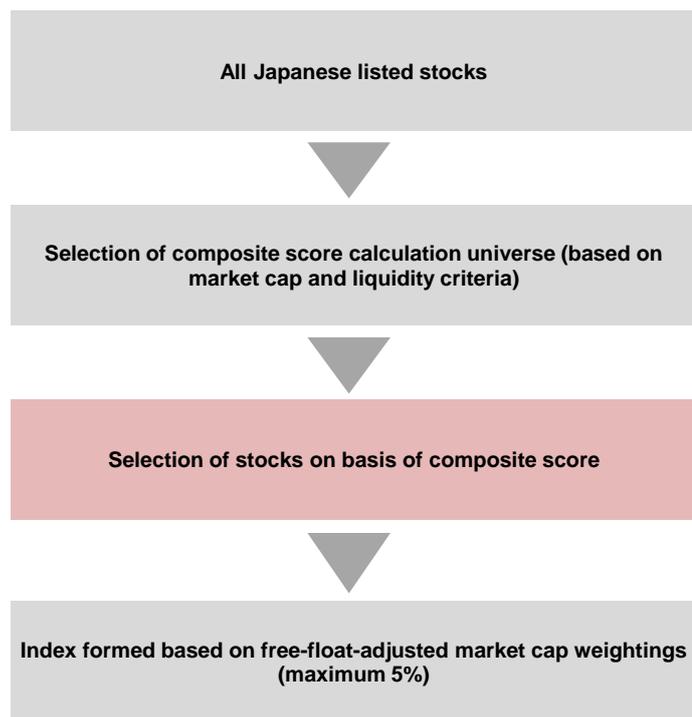

Source: Nomura

2.3 Selection method for index constituents

Index constituents are selected using the following method:

- 1) The stock selection universe (2.1) is selected from all stocks listed on Japanese stock exchanges.
- 2) From the stock selection universe, stocks that meet the market cap and liquidity criteria set out in 2.2.1 are selected for the composite score calculation universe.
- 3) The Nomura Japan Equity High Beta Select 30 comprises the 30 stocks with the highest composite scores for the selection of the Nomura Japan Equity High Beta Select 30, as set out in 2.2.4. The Nomura Japan Equity Low Beta Select 50 comprises the 50 stocks with the lowest composite scores for the selection of the Nomura Japan Equity Low Beta Select 50, as set out in 2.2.4⁷.

Fig. 2: Index construction method

Source: Nomura

⁷ If the number of stocks selected exceeds the required number (30 stocks in the case of the Nomura Japan Equity High Beta Select 30 and 50 stocks in the case of the Nomura Japan Equity Low Beta Select 50), stocks are selected in descending order of their free-float-adjusted market cap up to the required number.

2.4 Weighting of constituent stocks

2.4.1 Constituent stock weight and weight limit

Weights for each constituent stock are calculated using the free-float-adjusted market cap⁸ as of the reconfiguration base date. The maximum weight for each constituent stock is 5%. The weight of stocks exceeding the limit is allocated among other constituent stocks in proportion to their free-float-adjusted market cap.

2.4.2 Number of shares included in index for each constituent stock and index inclusion ratio

The number of shares included in the index and the weight for each constituent stock are calculated using data as of the reconfiguration base date so that the weight is equal to the constituent stock weight set out in 2.4.1.

Market cap of stock i included in index = weight of stock i included in index $\times \sum j$ (free-float adjusted market cap j)

No. of shares in stock i included in index = market cap of stock i included in index \div Nomura composite share price for stock i

Weight of stock i included in index = no. of shares in stock i included in index \div no. of shares outstanding in stock i for index calculation purposes

i indicates constituent stock number i and $\sum i$ indicates the sum of all index constituents.

• Nomura composite share price

The Nomura composite price is the price on the exchange that is judged to have the most accurate price for the stock, based on the percentage of days traded and trading volume over the previous 60 business days. As a general rule, the exchange is selected on a daily basis. The share price is selected according to the following order of precedence:

Contract price on selected exchange (see note) > standard price on selected exchange > Nomura composite share price on previous business day

Note: Priority is given to the special quotation price or continuous confirmed quotation price on the selected exchange if these are available.

⁸ Free-float-adjusted market cap = number of shares outstanding for index calculation purposes \times Nomura composite share price \times (1 - stable shareholding ratio). The stable shareholding ratio (based on the number of shares considered to be held on a stable basis) is estimated based on major shareholder data, declarations of marketable securities holdings contained in securities filings, and public information such as company prospectuses and stock exchange releases. The number of shares outstanding for index calculation purposes refers to the number of shares outstanding after reflecting changes in the number of shares in line with the timing of changes in capital structure as set out in 4.2. Adjusting base market capitalization.

3. Unscheduled reconfigurations

3.1. Response to stock swaps, stock transfers, mergers, etc⁹

Temporary exclusions of stocks from the index are avoided and the consistency of the stocks included in the index is maintained, based on the following rules.

3.1.1. Stock swaps and absorption-type mergers

When a stock is delisted because it is about to become a wholly owned subsidiary or be merged into another company (hereinafter, merged company), it may be included in the index after its delisting but is removed from the index on the day of the listing change (or on the following business day if this is a non-business day). Following its delisting, and until its removal from the index, the merged company's valuation will be based on the market value of the company that will become the parent or the surviving company multiplied by the exchange or merger ratio. Also, the index weighting of the parent company or surviving company is changed on the day of the listing change (or on the following business day if this is a non-business day) based on the exchange or merger ratio.

3.1.2. Stock transfers and consolidation mergers

When an unlisted parent company or surviving company in a merger (hereinafter, surviving company) assumes the operations of another company and becomes listed after a short period of time, the merged company is removed from the index on the new listing date of the surviving company (or on the following business day if this is a non-business day). The price used for the delisted merged company is the price on the day before its delisting. Also, the price used for the surviving company is the price on its new listing date. However, if the surviving company will not be included in the index after periodic reconfiguration, the merged company is removed from the index on the delisting date.

⁹ This rule applied beginning with April 2002 changes in capital structure.

3.2 Removal of stocks

3.2.1. Designation as securities to be delisted

Stocks designated as securities to be delisted will be removed from the index four business days later (or on the following business day if this is a non-business day). However, stocks that are listed on more than one market and have not been designated for delisting on one or more of the markets will not be removed.

3.2.2. Delisting

Stocks that are delisted for reasons other than those stated in 3.1. Response to stock swaps, stock transfers, mergers, etc are removed from the index on the day of their delisting.

3.2.3. Marked loss of eligibility for inclusion in stock selection universe

If a constituent stock shows a marked loss of eligibility for inclusion in the stock selection universe for one of the reasons given in 2.1. Stock selection universe, it may be removed from the index following an official announcement by the company in question, the stock exchange, or a government/regulatory agency. However, if that reason ceases to exist after the stock has been removed from the index, its ineligibility will cease to apply from the next periodic reconfiguration.

4. Index calculation

4.1 Index calculation method

4.1.1 Index base date, index base value, index publication start date

The base date for the Nomura Japan Equity High Beta Select 30 and the Nomura Japan Equity Low Beta Select 50 is 29 December 2000 and the value of the indices on the base date (base value) is 10,000. Publication of index values will start on 18 January 2017.

4.1.2 Calculation of index market cap

Index market cap = $\sum i$ (market cap of constituent stock i)

4.1.3 Calculation of index values

Calculation of yen-based index values

To prevent index values from being affected by changes in market capitalization that are not related to market fluctuations, eg, changes in capital structure and index constituents, the indices are calculated as follows using base market capitalization.

- **Indices excluding dividends**

Base market cap _{t} = index market cap _{$t-1$} + adjusted market cap _{t}

$$\text{Return}_t = \frac{\text{index market cap}_t}{\text{base market cap}_t} - 1$$

Index value _{t} = index value _{$t-1$} \times (1 + return _{t})

- **Indices including dividends**

Base market cap _{t} = index market cap _{$t-1$} + adjusted market cap _{t} – adjusted total dividends _{t}

$$\text{Return}_t = \frac{\text{index market cap}_t + \text{total dividends}_t}{\text{base market cap}_t} - 1$$

Index value _{t} = index value _{$t-1$} \times (1 + return _{t})

Method for reflecting dividends

For the indices including dividends, dividends are reflected in index values on the ex-dividend date. However, as the value of the dividend has not yet been determined as of the ex-dividend date, the stock issuer's dividend forecast is used (if this is unavailable, the Toyo Keizai dividend forecast is used)¹⁰. In the event that a difference subsequently arises between the dividend forecast and the actual dividend, the base market capitalization is adjusted on the last business day of the month of the earnings announcement (if the earnings announcement is made on the last business day of the month, the base market capitalization is adjusted on the last business day of the following month). In addition, if dividend adjustment is required, the base market capitalization is adjusted on the last business day of the month in which this became clear (if the day in which this became clear is the last business day of the month, the base market capitalization is adjusted on the last business day of the following month).

¹⁰ This rule applies to accounting periods ending end-December 2011 onward. For periods before this, the actual dividend as of the ex-dividend date is used.

- **Indices based on dividends after tax**

Because dividends are subject to taxation, index values based on total dividends after taking dividend taxation into account are calculated using the following formula. Index values are calculated using the tax rate for Japanese residents¹¹.

Tax adjusted base market cap_t = index market cap_{t-1} + adjusted market cap_t – adjusted tax adjusted total dividends_t

$$\text{Return}_t = \frac{\text{index market cap}_t + \text{tax adjusted total dividends}_t}{\text{tax adjusted base market cap}_t} - 1$$

$$\text{Index value}_t = \text{index value}_{t-1} \times (1 + \text{return}_t)$$

Calculation of US dollar-based index values

US dollar-denominated index values are calculated using yen-denominated index values and the forex rate on the index base date, using the formula below. Index values excluding dividends and index values including dividends are calculated separately. The forex rate used is the USD/JPY middle rate announced by the BOJ (at 17:00).

$$\begin{aligned} \text{US dollar denominated index value} \\ = \frac{\text{yen based index value} \times \text{forex rate on index base date}}{\text{forex rate}} \end{aligned}$$

¹¹ The tax rate for Japanese residents is 15.315% as of January 2017. Total dividends after tax are calculated by applying the tax rate on the business day before the ex-dividend date. The tax rate is revised on a quarterly basis (in January, April, July, and October).

4.2 Adjusting base market capitalization

Base market capitalization is adjusted in the following way if there is a change in capital structure or in index constituent stocks. However, no adjustment is made to base market capitalization to reflect changes in capital structure that do not involve payment, such as stock splits, reverse stock splits, and changes in face value, as these do not affect market cap.

Fig. 3: Timing of adjustments resulting from changes in capital structure

	Type of change in capital structure	Adjustment date	Share price used
Stock replace- ment	Stock transfer, stock swap, merger	Date of listing change	Previous day's price
	Corporate divestiture (company/division spinoff)	Ex-rights date	Not used ¹²
	Stock replacement	Replacement date	Previous day's price
Capital increase	Rights offering	Ex-rights date	Issue price
	Gratis allocation of stock acquisition rights	Ex-rights date	Exercise price
	Gratis allocation of treasury stock	Ex-rights date	Previous day's price
	Public offering	Business day following payment date (listing date of new shares when settlement is on issuance date)	Previous day's price
	Capital increase via third-party placement	Five business days after date of listing change	Previous day's price
	Conversion of preferred stock	Last business day of month in which number of converted shares becomes known	Previous day's price
	Conversion of CBs Exercise of stock acquisition rights	Last business day of month in which number of new shares for which rights were exercised becomes known	Previous day's price
	Corporate divestiture (new stock in continuing company)	Date of listing change	Previous day's price
Capital reduction	Retirement of treasury stock	Last business day of month following month of treasury stock retirement	Previous day's price
	Rights offering refusal	Last business day of month following month in which rights offering refusal is announced (or last business day of following month if announcement is within five business days of month-end)	Previous day's price
	Capital reduction with compensation	Effective date	Previous day's price
Other	Other adjustments	Other adjustments to base market capitalization, if required, are made on the last business day of the month of the disclosure of the relevant information (or the last business day of the following month if the disclosure is made within five business days of the month-end)	Previous day's price

Source: Nomura

¹² In the case of a corporate divestiture (company/division spinoff), the base market capitalization is adjusted for the reduction in capital. The reduction in capital is defined as follows: (1) when the divesting entity does not announce the value of the divested division or of the shares of the divested (spun-off) company, capital is reduced by the amount by which the divesting entity's shareholders' equity is expected to be reduced and (2) when the divesting entity does announce the value of the divested division or of the shares of the divested (spun-off) company, capital is reduced by the value of the division or the value of the divested company's shares multiplied by the total number of shares.

4.3 Index maintenance

Constituent stocks are replaced in periodic and unscheduled reconfigurations and when necessary for other reasons. In addition, when the following changes in capital structure result in a change in the number of shares outstanding for index calculation purposes, the index inclusion ratio is changed so that number of shares in the stock that are included in the index does not change.

- Stock transfer, stock swap, merger¹³
- Rights offering
- Gratis allocation of stock acquisition rights
- Public offering
- Capital increase via third-party placement
- Conversion of preferred shares
- Conversion of CBs, exercise of stock acquisition rights
- Corporate divestiture (new stock in surviving company)
- Retirement of treasury stock
- Rights offering refusal
- Capital reduction with compensation
- Other adjustments

¹³ When an index constituent becomes a wholly owned subsidiary (or merged company), the index inclusion ratio of the parent (or surviving company) is changed so that the total number of shares in the index remains the same as it was before, taking the exchange ratio (or merger ratio) into account.

5. Data publication services

Distribution of ratings (Instinet, LLC)

The distribution of all ratings published by Instinet, LLC Equity Research is as follows:

55% have been assigned a Buy rating which, for purposes of mandatory disclosures, are classified as a Buy rating; Instinet LLC has provided investment banking services to 0% of companies with this rating within the previous 12 months.

41% have been assigned a Neutral rating which, for purposes of mandatory disclosures, is classified as a Hold rating; Instinet LLC has provided investment banking services to 0% of companies with this rating within the previous 12 months.

4% have been assigned a Reduce rating which, for purposes of mandatory disclosures, are classified as a Sell rating; Instinet LLC has provided investment banking services to 0% of companies with this rating within the previous 12 months.

Definition of Nomura Group's equity research rating system and sectors

The rating system is a relative system, indicating expected performance against a specific benchmark identified for each individual stock, subject to limited management discretion. An analyst's target price is an assessment of the current intrinsic fair value of the stock based on an appropriate valuation methodology determined by the analyst. Valuation methodologies include, but are not limited to, discounted cash flow analysis, expected return on equity and multiple analysis. Analysts may also indicate expected absolute upside/downside relative to the stated target price, defined as (target price - current price)/current price.

STOCKS

A rating of '**Buy**', indicates that the analyst expects the stock to outperform the Benchmark over the next 12 months. A rating of '**Neutral**', indicates that the analyst expects the stock to perform in line with the Benchmark over the next 12 months. A rating of '**Reduce**', indicates that the analyst expects the stock to underperform the Benchmark over the next 12 months. A rating of '**Suspended**', indicates that the rating, target price and estimates have been suspended temporarily to comply with applicable regulations and/or firm policies. Securities and/or companies that are labelled as '**Not rated**' or shown as '**No rating**' are not in regular research coverage. Investors should not expect continuing or

additional information from Nomura relating to such securities and/or companies. Benchmarks are as follows: **United States/Europe/Asia ex-Japan**: please see valuation methodologies for explanations of relevant benchmarks for stocks, which can be accessed at: <http://go.nomuranow.com/research/globalresearchportal/pages/disclosures/disclosures.aspx>; **Global Emerging Markets (ex-Asia)**: MSCI Emerging Markets ex-Asia, unless otherwise stated in the valuation methodology; **Japan**: Russell/Nomura Large Cap.

SECTORS

A **'Bullish'** stance, indicates that the analyst expects the sector to outperform the Benchmark during the next 12 months. A **'Neutral'** stance, indicates that the analyst expects the sector to perform in line with the Benchmark during the next 12 months. A **'Bearish'** stance, indicates that the analyst expects the sector to underperform the Benchmark during the next 12 months. Sectors that are labelled as **'Not rated'** or shown as **'N/A'** are not assigned ratings. Benchmarks are as follows: **United States**: S&P 500; **Europe**: Dow Jones STOXX 600; **Global Emerging Markets (ex-Asia)**: MSCI Emerging Markets ex-Asia. **Japan/Asia ex-Japan**: Sector ratings are not assigned.

Target Price

A Target Price, if discussed, indicates the analyst's forecast for the share price with a 12-month time horizon, reflecting in part the analyst's estimates for the company's earnings. The achievement of any target price may be impeded by general market and macroeconomic trends, and by other risks related to the company or the market, and may not occur if the company's earnings differ from estimates.

Disclaimers

This publication contains material that has been prepared by the Nomura Group entity identified on page 1 and, if applicable, with the contributions of one or more Nomura Group entities whose employees and their respective affiliations are specified on page 1 or identified elsewhere in the publication. The term "Nomura Group" used herein refers to Nomura Holdings, Inc. and its affiliates and subsidiaries including: Nomura Securities Co., Ltd. ('NSC') Tokyo, Japan; Nomura International plc ('Nlplc'), UK; Nomura Securities International, Inc. ('NSI'), New York, US; Instinet, LLC ('ILLC'); Nomura International (Hong Kong) Ltd. ('NIHK'), Hong Kong; Nomura Financial Investment (Korea) Co., Ltd. ('NFIK'), Korea (Information on Nomura analysts registered with the Korea Financial Investment Association ('KOFIA') can be found on the KOFIA Intranet at <http://dis.kofia.or.kr>); Nomura Singapore Ltd. ('NAL'), Australia (ABN 48 003 032 513), regulated by the Australian Securities and Investment Commission ('ASIC') and holder of an Australian financial services licence number 246412; PT Nomura Sekuritas Indonesia ('PTNSI'); Nomura Securities Malaysia Sdn. Bhd. ('NSM'), Malaysia; NIHK, Taipei Branch ('NITB'), Taiwan; Nomura Financial Advisory and Securities (India) Private Limited ('NFASL'), Mumbai, India (Registered Address: Ceejay House, Level 11, Plot F, Shivsagar Estate, Dr. Annie Besant Road, Worli, Mumbai- 400 018, India; Tel: +91 22 4037 4037, Fax: +91 22 4037 4111; CIN No: U74140MH2007PTC169116, SEBI Registration No. for Stock Broking activities : BSE INB011299030, NSE INB231299034, INF231299034, INE 231299034, MCX: INE261299034; SEBI Registration No. for Merchant Banking : INM000011419; SEBI Registration No. for Research: INH000001014 and Nlplc, Madrid Branch ('Nlplc, Madrid')). 'CNS Thailand' next to an analyst's name on the front page of a research report indicates that the analyst is employed by Capital Nomura Securities Public Company Limited ('CNS') to provide research assistance services to NSL under an agreement between CNS and NSL. 'NSFSPL' next to an employee's name on the front page of a research report indicates that the individual is employed by Nomura Structured Finance Services Private Limited to provide assistance to certain Nomura entities under inter-company agreements. The "BDO-NS" (which stands for "BDO Nomura Securities, Inc.") placed next to an analyst's name on the front page of a research report indicates that the analyst is employed by BDO Unibank Inc. ("BDO Unibank") who has been seconded to BDO-NS, to provide research assistance services to NSL under an agreement between BDO Unibank, NSL and BDO-NS. BDO-NS is a Philippines securities dealer, which is a joint venture between BDO Unibank and the Nomura Group.

THIS MATERIAL IS: (I) FOR YOUR PRIVATE INFORMATION, AND WE ARE NOT SOLICITING ANY ACTION BASED UPON IT; (II) NOT TO BE CONSTRUED AS AN OFFER TO SELL OR A SOLICITATION OF AN OFFER TO BUY ANY SECURITY IN ANY JURISDICTION WHERE SUCH OFFER OR SOLICITATION WOULD BE ILLEGAL; AND (III) OTHER THAN DISCLOSURES RELATING TO THE NOMURA GROUP, BASED UPON INFORMATION FROM SOURCES THAT WE CONSIDER RELIABLE, BUT HAS NOT BEEN INDEPENDENTLY VERIFIED BY NOMURA GROUP.

Other than disclosures relating to the Nomura Group, the Nomura Group does not warrant or represent that the document is accurate, complete, reliable, fit for any particular purpose or merchantable and does not accept liability for any act (or decision not to act) resulting from use of this document and related data. To the maximum extent permissible all warranties and other assurances by the Nomura Group are hereby excluded and the Nomura Group shall have no liability for the use, misuse, or distribution of this information.

Opinions or estimates expressed are current opinions as of the original publication date appearing on this material and the information, including the opinions and estimates contained herein, are subject to change without notice. The Nomura Group is under no duty to update this document. Any comments or statements made herein are those of the author(s) and may differ from views held by other parties within Nomura Group. Clients should consider whether any advice or recommendation in this report is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The Nomura Group does not provide tax advice.

The Nomura Group, and/or its officers, directors and employees, may, to the extent permitted by applicable law and/or regulation, deal as principal, agent, or otherwise, or have long or short positions in, or buy or sell, the securities, commodities or instruments, or options or other derivative instruments based thereon, of issuers or securities mentioned herein. The Nomura Group companies may also act as market maker or liquidity provider (within the meaning of applicable regulations in the UK) in the financial instruments of the issuer. Where the activity of market maker is carried out in accordance with the definition given to it by specific laws and regulations of the US or other jurisdictions, this will be separately disclosed within the specific issuer disclosures.

This document may contain information obtained from third parties, including ratings from credit ratings agencies such as Standard & Poor's. Reproduction and distribution of third-party content in any form is prohibited except with the prior written permission of the related third-party. Third-party content providers do not guarantee the accuracy, completeness, timeliness or availability of any information, including ratings, and are not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, or for the results obtained from the use of such content. Third-party content providers give no express or implied warranties, including, but not limited to, any warranties of merchantability or fitness for a particular purpose or use. Third-party content providers shall not be liable for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use of their content, including ratings. Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase hold or sell securities. They do not address the suitability of securities or the suitability of securities for investment purposes, and should not be relied on as investment advice.

Any MSCI sourced information in this document is the exclusive property of MSCI Inc. ('MSCI'). Without prior written permission of MSCI, this information and any other MSCI intellectual property may not be reproduced, re-disseminated or used to create any financial products, including any indices. This information is provided on an "as is" basis. The user assumes the entire risk of any use made of this information. MSCI, its affiliates and any third party involved in, or related to, computing or compiling the information hereby expressly disclaim all warranties of

originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of this information. Without limiting any of the foregoing, in no event shall MSCI, any of its affiliates or any third party involved in, or related to, computing or compiling the information have any liability for any damages of any kind. MSCI and the MSCI indexes are services marks of MSCI and its affiliates.

The intellectual property rights and any other rights, in Russell/Nomura Japan Equity Index belong to Nomura Securities Co., Ltd. ("Nomura") and Frank Russell Company ("Russell"). Nomura and Russell do not guarantee accuracy, completeness, reliability, usefulness, marketability, merchantability or fitness of the Index, and do not account for business activities or services that any index user and/or its affiliates undertakes with the use of the Index.

Investors should consider this document as only a single factor in making their investment decision and, as such, the report should not be viewed as identifying or suggesting all risks, direct or indirect, that may be associated with any investment decision. Nomura Group produces a number of different types of research product including, among others, fundamental analysis and quantitative analysis; recommendations contained in one type of research product may differ from recommendations contained in other types of research product, whether as a result of differing time horizons, methodologies or otherwise. The Nomura Group publishes research product in a number of different ways including the posting of product on the Nomura Group portals and/or distribution directly to clients. Different groups of clients may receive different products and services from the research department depending on their individual requirements.

Figures presented herein may refer to past performance or simulations based on past performance which are not reliable indicators of future performance. Where the information contains an indication of future performance, such forecasts may not be a reliable indicator of future performance. Moreover, simulations are based on models and simplifying assumptions which may oversimplify and not reflect the future distribution of returns. Any figure, strategy or index created and published for illustrative purposes within this document is not intended for "use" as a "benchmark" as defined by the European Benchmark Regulation.

Certain securities are subject to fluctuations in exchange rates that could have an adverse effect on the value or price of, or income derived from, the investment.

With respect to Fixed Income Research: Recommendations fall into two categories: tactical, which typically last up to three months; or strategic, which typically last from 6-12 months. However, trade recommendations may be reviewed at any time as circumstances change. 'Stop loss' levels for trades are also provided; which, if hit, closes the trade recommendation automatically. Prices and yields shown in recommendations are taken at the time of submission for publication and are based on either indicative Bloomberg, Reuters or Nomura prices and yields at that time. The prices and yields shown are not necessarily those at which the trade recommendation can be implemented.

The securities described herein may not have been registered under the US Securities Act of 1933 (the '1933 Act'), and, in such case, may not be offered or sold in the US or to US persons unless they have been registered under the 1933 Act, or except in compliance with an exemption from the registration requirements of the 1933 Act. Unless governing law permits otherwise, any transaction should be executed via a Nomura entity in your home jurisdiction.

This document has been approved for distribution in the UK and European Economic Area as investment research by Nlplc. Nlplc is authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority. Nlplc is a member of the London Stock Exchange. This document does not constitute a personal recommendation within the meaning of applicable regulations in the UK, or take into account the particular investment objectives, financial situations, or needs of individual investors. This document is intended only for investors who are 'eligible counterparties' or 'professional clients' for the purposes of applicable regulations in the UK, and may not, therefore, be redistributed to persons who are 'retail clients' for such purposes. This document has been approved by NIHK, which is regulated by the Hong Kong Securities and Futures Commission, for distribution in Hong Kong by NIHK. This document has been approved for distribution in Australia by NAL, which is authorized and regulated in Australia by the ASIC. This document has also been approved for distribution in Malaysia by NSM. In Singapore, this document has been distributed by NSL. NSL accepts legal responsibility for the content of this document, where it concerns securities, futures and foreign exchange, issued by their foreign affiliates in respect of recipients who are not accredited, expert or institutional investors as defined by the Securities and Futures Act (Chapter 289). Recipients of this document in Singapore should contact NSL in respect of matters arising from, or in connection with, this document. Unless prohibited by the provisions of Regulation S of the 1933 Act, this material is distributed in the US, by NSI, a US-registered broker-dealer, which accepts responsibility for its contents in accordance with the provisions of Rule 15a-6, under the US Securities Exchange Act of 1934. The entity that prepared this document permits its separately operated affiliates within the Nomura Group to make copies of such documents available to their clients.

This document has not been approved for distribution to persons other than 'Authorised Persons', 'Exempt Persons' or 'Institutions' (as defined by the Capital Markets Authority) in the Kingdom of Saudi Arabia ('Saudi Arabia') or 'professional clients' (as defined by the Dubai Financial Services Authority) in the United Arab Emirates ('UAE') or a 'Market Counterparty' or 'Business Customers' (as defined by the Qatar Financial Centre Regulatory Authority) in the State of Qatar ('Qatar') by Nomura Saudi Arabia, Nlplc or any other member of the Nomura Group, as the case may be. Neither this document nor any copy thereof may be taken or transmitted or distributed, directly or indirectly, by any person other than those authorised to do so into Saudi Arabia or in the UAE or in Qatar or to any person other than 'Authorised Persons', 'Exempt Persons' or 'Institutions' located in Saudi Arabia or 'professional clients' in the UAE or a 'Market Counterparty' or 'Business Customers' in Qatar. By accepting to receive this document, you represent that you are not located in Saudi Arabia or that you are an 'Authorised Person', an 'Exempt Person' or an 'Institution' in Saudi Arabia or that you are a 'professional client' in the UAE or a 'Market Counterparty' or 'Business Customers' in Qatar and agree to comply with these restrictions. Any failure to comply with these restrictions may constitute a violation of the laws of the UAE or Saudi Arabia or Qatar.

For Canadian Investors: This research report was approved for distribution to Canadian investors by Instinet Canada Limited ("ICL"), member of the Investment Industry Regulatory Organization of Canada ("IIROC") and member of the Canadian Investor Protection Fund. An affiliate of ICL prepared the research report (an "Affiliate Research Report") in accordance with the regulatory requirements applicable to research in the affiliate's local jurisdiction, which include conflict of interest disclosure. ICL reviewed this Affiliate Research Report for the purpose of ensuring Canadian disclosures required by IIROC are included. ICL does not receive compensation in respect of the distribution of Affiliate Research Reports. Pursuant to ICL's policies and procedures regarding the dissemination of research, ICL makes available Affiliate Research Reports to ICL clients and prospective clients only, in electronic and/or in printed form. ICL endeavours to make available and/or distribute Affiliate Research Reports to all intended recipients at the same time. This Affiliate Research Report is not a recommendation and does not take into account the investment objectives, financial situation or particular needs of any particular account.

Disclaimers required in Japan

Credit ratings in the text that are marked with an asterisk (*) are issued by a rating agency not registered under Japan's Financial Instruments and Exchange Act ("Unregistered Ratings"). For details on Unregistered Ratings, please contact the Research Product Management Dept. of Nomura Securities Co., Ltd.

Investors in the financial products offered by Nomura Securities may incur fees and commissions specific to those products (for example, transactions involving Japanese equities are subject to a sales commission (all figures on a tax-inclusive basis) of up to 1.404% of the transaction amount or a commission of ¥2,808 for transactions of ¥200,000 or less, while transactions involving investment trusts are subject to various fees, such as commissions at the time of purchase and asset management fees (trust fees), specific to each investment trust). In addition, all products carry the risk of losses owing to price fluctuations or other factors. Fees and risks vary by product. Please thoroughly read the written materials provided, such as documents delivered before making a contract, listed securities documents, or prospectuses.

Transactions involving Japanese equities (including Japanese REITs, Japanese ETFs, and Japanese ETNs) are subject to a sales commission of up to 1.404% of the transaction amount (or a commission of ¥2,808 for transactions of ¥200,000 or less). When Japanese equities are purchased via OTC transactions (including offerings), only the purchase price shall be paid, with no sales commission charged. However, Nomura Securities may charge a separate fee for OTC transactions, as agreed with the customer. Japanese equities carry the risk of losses owing to price fluctuations. Japanese REITs carry the risk of losses owing to fluctuations in price and/or earnings of underlying real estate. Japanese ETFs carry the risk of losses owing to fluctuations in the underlying indexes or other benchmarks.

Transactions involving foreign equities are subject to a domestic sales commission of up to 1.026% of the transaction amount (which equals the local transaction amount plus local fees and taxes in the case of a purchase or the local transaction amount minus local fees and taxes in the case of a sale) (for transaction amounts of ¥750,000 and below, maximum domestic sales commission is ¥7,668). Local fees and taxes in foreign financial instruments markets vary by country/territory. When foreign equities are purchased via OTC transactions (including offerings), only the purchase price shall be paid, with no sales commission charged. However, Nomura Securities may charge a separate fee for OTC transactions, as agreed with the customer. Foreign equities carry the risk of losses owing to factors such as price fluctuations and foreign exchange rate fluctuations.

Margin transactions are subject to a sales commission of up to 1.404% of the transaction amount (or a commission of ¥2,808 for transactions of ¥200,000 or less), as well as management fees and rights handling fees. In addition, long margin transactions are subject to interest on the purchase amount, while short margin transactions are subject to fees for the lending of the shares borrowed. A margin equal to at least 30% of the transaction amount (at least 33% for online transactions) and at least ¥300,000 is required. With margin transactions, an amount up to roughly 3.3x the margin (roughly 3x for online transactions) may be traded. Margin transactions therefore carry the risk of losses in excess of the margin owing to share price fluctuations. For details, please thoroughly read the written materials provided, such as listed securities documents or documents delivered before making a contract.

Transactions involving convertible bonds are subject to a sales commission of up to 1.08% of the transaction amount (or a commission of ¥4,320 if this would be less than ¥4,320). When convertible bonds are purchased via OTC transactions (including offerings), only the purchase price shall be paid, with no sales commission charged. However, Nomura Securities may charge a separate fee for OTC transactions, as agreed with the customer. Convertible bonds carry the risk of losses owing to factors such as interest rate fluctuations and price fluctuations in the underlying stock. In addition, convertible bonds denominated in foreign currencies also carry the risk of losses owing to factors such as foreign exchange rate fluctuations.

When bonds are purchased via public offerings, secondary distributions, or other OTC transactions with Nomura Securities, only the purchase price shall be paid, with no sales commission charged. Bonds carry the risk of losses, as prices fluctuate in line with changes in market interest rates. Bond prices may also fall below the invested principal as a result of such factors as changes in the management and financial circumstances of the issuer, or changes in third-party valuations of the bond in question. In addition, foreign currency-denominated bonds also carry the risk of losses owing to factors such as foreign exchange rate fluctuations.

When Japanese government bonds (JGBs) for individual investors are purchased via public offerings, only the purchase price shall be paid, with no sales commission charged. As a rule, JGBs for individual investors may not be sold in the first 12 months after issuance. When JGBs for individual investors are sold before maturity, an amount calculated via the following formula will be subtracted from the par value of the bond plus accrued interest: (1) for 10-year variable rate bonds, an amount equal to the two preceding coupon payments (before tax) x 0.79685 will be used, (2) for 5-year and 3-year fixed rate bonds, an amount equal to the two preceding coupon payments (before tax) x 0.79685 will be used. When inflation-indexed JGBs are purchased via public offerings, secondary distributions (uridashi deals), or other OTC transactions with Nomura Securities, only the purchase price shall be paid, with no sales commission charged. Inflation-indexed JGBs carry the risk of losses, as prices fluctuate in line with changes in market interest rates and fluctuations in the nationwide consumer price index. The notional principal of inflation-indexed JGBs changes in line with the rate of change in nationwide CPI inflation from the time of its issuance. The amount of the coupon payment is calculated by multiplying the coupon rate by the notional principal at the time of payment. The maturity value is the amount of the notional principal when the issue becomes due. For J117 and subsequent issues, the maturity value shall not undercut the face amount. Purchases of investment trusts (and sales of some investment trusts) are subject to a purchase or sales fee of up to 5.4% of the transaction amount. Also, a direct cost that may be incurred when selling investment trusts is a fee of up to 2.0% of the unit price at the time of redemption. Indirect costs that may be incurred during the course of holding investment trusts include, for domestic investment trusts, an asset management fee (trust fee) of up to 5.4% (annualized basis) of the net assets in trust, as well as fees based on investment performance. Other indirect costs may also be incurred. For foreign investment trusts, indirect fees may be incurred during the course of holding such as investment company compensation.

Investment trusts invest mainly in securities such as Japanese and foreign equities and bonds, whose prices fluctuate. Investment trust unit prices fluctuate owing to price fluctuations in the underlying assets and to foreign exchange rate fluctuations. As such, investment trusts carry the risk of losses. Fees and risks vary by investment trust. Maximum applicable fees are subject to change; please thoroughly read the written materials provided, such as prospectuses or documents delivered before making a contract.

In interest rate swap transactions and USD/JPY basis swap transactions ("interest rate swap transactions, etc."), only the agreed transaction payments shall be made on the settlement dates. Some interest rate swap transactions, etc. may require pledging of margin collateral. In some of these cases, transaction payments may exceed the amount of collateral. There shall be no advance notification of required collateral value or collateral ratios as they vary depending on the transaction. Interest rate swap transactions, etc. carry the risk of losses owing to fluctuations in market prices in the interest rate, currency and other markets, as well as reference indices. Losses incurred as such may exceed the value of margin collateral, in which case margin calls may be triggered. In the event that both parties agree to enter a replacement (or termination) transaction, the interest rates received (paid) under the new arrangement may differ from those in the original arrangement, even if terms other than the interest rates are identical to those in the original transaction. Risks vary by transaction. Please thoroughly read the written materials provided, such as documents delivered before making a contract and disclosure statements.

In OTC transactions of credit default swaps (CDS), no sales commission will be charged. When entering into CDS transactions, the protection buyer will be required to pledge or entrust an agreed amount of margin collateral. In some of these cases, the transaction payments may exceed the amount of margin collateral. There shall be no advance notification of required collateral value or collateral ratios as they vary depending on the financial position of the protection buyer. CDS transactions carry the risk of losses owing to changes in the credit position of some or all of the referenced entities, and/or fluctuations of the interest rate market. The amount the protection buyer receives in the event that the CDS is triggered by a credit event may undercut the total amount of premiums that he/she has paid in the course of the transaction. Similarly, the amount the protection seller pays in the event of a credit event may exceed the total amount of premiums that he/she has received in the transaction. All other conditions being equal, the amount of premiums that the protection buyer pays and that received by the protection seller shall differ. In principle, CDS transactions will be limited to financial instruments business operators and qualified institutional investors. No account fee will be charged for marketable securities or monies deposited. Transfers of equities to another securities company via the Japan Securities Depository Center are subject to a transfer fee of up to ¥10,800 per issue transferred depending on volume.

Nomura Securities Co., Ltd.

Financial instruments firm registered with the Kanto Local Finance Bureau (registration No. 142)

Member associations: Japan Securities Dealers Association; Japan Investment Advisers Association; The Financial Futures Association of Japan; and Type II Financial Instruments Firms Association.
